Solution:

- The angle at point B, denoted as ?ABC, measures 90°.
- An angle measuring exactly 90° is classified as a right angle.
- Justification: By definition, a right angle is an angle that measures exactly 90°. Since the given angle measures 90°, ?ABC is a right angle.

Question 2: Find the Missing Angle in a Triangle

Question: Triangle DEF has two angles measuring 50° and 60°. Find the measure of the third angle.

Solution:

- The sum of interior angles in a triangle is always 180°.

Question: In the diagram, segment AB measures 8 cm, and segment CD measures 8 cm. Are these segments congruent? Justify your answer.

Solution:

- Segments are congruent if they have the same length.
- Given: AB = 8 cm and CD = 8 cm.
- Since both segments measure 8 cm, AB ? CD.
- Conclusion: Yes, segments AB and CD are congruent because they have equal lengths.

Question 4: Identify Parallel Lines

Question: Given a diagram with two lines cut by a transversal, identify which pairs of lines are parallel based on the angles provided.

Solution:

- When two lines are cut by a transversal, certain angles are equal if the lines are parallel.
- For example, if alternate interior angles are equal, the lines are parallel.
- Using the provided angles (say, 110° and 110°), verify their positions.
- If alternate interior angles are equal, then the lines are parallel.
