Sample Problems on Solid Mensuration Involving Plane Figures

This section presents a variety of sample problems covering different shapes and concepts within solid mensuration.

Problem 1: Calculating the Surface Area of a Cylinder

Problem:

A cylindrical water tank has a radius of 3 meters and a height of 10 meters. Find the total surface area of the tank, including the top and bottom surfaces.

Solution:

The total surface area (SA) of a cylinder includes the lateral surface area and the areas of the two circular bases.

- Step 1: Calculate the lateral surface area (LSA):

LSA = 2?rh

= 2 × 3.14 × 3 × 10

= 2 × 3.14 × 30

= 188.4 m²

- Step 2: Calculate the area of the two bases:

Area of one base = ?r² = 3.14 × 3² = 3.14 × 9 = 28.26 m²

For two bases: 2 × 28.26 = 56.52 m²

- Step 3: Find the total surface area:

SA = LSA + area of bases

= 188.4 + 56.52

= 244.92 m^2

Final Answer:

The total surface area of the water tank is approximately 244.92 square meters.

Problem 2: Volume of a Cone with a Triangular Base

Problem:

A conical tent has a base in the shape of an equilateral triangle with side length 6 meters, and the height from the base to the apex is 9 meters. Find the volume of the cone.

Solution:

Note: Typically, a cone has a circular base, but the problem specifies a triangular base?this is a pyramid with a triangular base, known as a triangular prism or a triangular pyramid (tetrahedron) depending on the shape. Assuming it is a triangular pyramid (tetrahedron), the volume formula is different.

However, since the problem mentions a "cone" with a triangular base, it might refer to a triangular pyramid. For clarity, let's assume it is a triangular pyramid, and the height is perpendicular from the base to the apex.

- Step 1: Calculate the area of the triangular base:

For an equilateral triangle with side s = 6 m:

Area = (?3 / 4) × s^2

= (1.732 / 4) × 36

= 0.433 × 36

? 15.588 m²

- Step 2: Use the volume formula for a pyramid:

Volume = (1/3) × base area × height

= (1/3) × 15.588 × 9

? (1/3) × 140.292

? 46.764 m³

Final Answer:

The volume of the triangular pyramid (assuming a tetrahedral shape) is approximately 46.76 cubic meters.

Problem 3: Surface Area of a Regular Hexagonal Prism

Problem:

A hexagonal prism has a side length of 4 meters and a height of 8 meters. Determine its total surface area.

Solution:

A regular hexagonal prism's surface area includes the areas of the two hexagonal bases and the rectangular lateral faces.

- Step 1: Calculate the area of one hexagonal base:

Area of a regular hexagon = (3?3 / 2) × s²

= (3 × 1.732 / 2) × 16

= (5.196 / 2) × 16

? 2.598 × 16

? 41.57 m²

- Step 2: Total area of two bases:

2 × 41.57 = 83.14 m²

- Step 3: Calculate the lateral surface area:

The perimeter of the hexagon = 6 × s = 6 × 4 = 24 meters

Lateral surface area = perimeter × height

= 24 × 8

= 192 m²

- Step 4: Total surface area:

SA = lateral area + area of bases

= 192 + 83.14

? 275.14 m²

Final Answer:

The total surface area of the hexagonal prism is approximately 275.14 square meters.

Problem 4: Volume and Surface Area of a Sphere with a Plane Figure Cross-Section

Problem:

A sphere has a radius of 5 meters. A plane cuts through the sphere, creating a circular cross-section of radius 3 meters. Find the volume of the segment of the sphere lying above the plane.

Solution:

This involves understanding the segment of a sphere cut by a plane.

- Step 1: Find the distance from the sphere?s center to the plane (h):

Using the circle radius of the cross-section (r_c):

$r_c^2 = R^2 - h^2$

? $h = \sqrt{(R^2 - r_c^2)}$

$= \sqrt{(25 - 9)}$

$= \sqrt{16} = 4$ meters

- Step 2: Calculate the volume of the spherical segment (above the plane):

The volume of a spherical cap is:

$V = (1/3)\pi h^2(3R - h)$

- Step 3: Plug in the values:

$V = (1/3) \times 3.14 \times 4^2 \times (3 \times 5 - 4)$

$= (1/3) \times 3.14 \times 16 \times (15 - 4)$

$= (1/3) \times 3.14 \times 16 \times 11$

$= (1/3) \times 3.14 \times 176$

? $(1/3) \times 552.64$

? 184.21 m^3

Final Answer:

The volume of the spherical segment above the plane is approximately 184.21 cubic meters.
